Research Summary

Digital radiography is an advanced medical imaging technique that uses digital detectors to capture X-ray images of the body. Instead of traditional X-ray film, digital radiography systems use electronic sensors to convert X-ray photons into digital signals, which are then processed and displayed on a computer screen. This technology offers numerous advantages over conventional film-based radiography, including faster image acquisition, lower radiation dose, immediate image review, digital storage, and the ability to manipulate and enhance images for better diagnosis. Digital radiography is widely used in medical facilities for diagnosing a wide range of conditions, from fractures and dental issues to detecting internal diseases and injuries.

The major global manufacturers of Digital Radiography include GE Healthcare, Siemens Healthcare, Philips Healthcare, Agfa HealthCare, Fujifilm, Angell Technology, Carestream Health, Hitachi, Wandong Medical, Mindray, Land Wind, Toshiba, Konica Minolta, DEXIS, Shimadzu, Source-Ray, Samsung, etc. The global players competition landscape in this report is divided into three tiers.
