Research Summary

A digital type air micrometer is a precision measuring instrument used to measure the thickness, diameter, or internal dimensions of an object with high accuracy, using air pressure instead of mechanical contact. It typically features a sensor that detects changes in air pressure as a result of the movement of the object being measured. The digital display provides a clear and direct readout of the measurement, often with fine resolution and the ability to display measurements in various units. Digital air micrometers are widely used in quality control and manufacturing environments, especially in the production of small, delicate, or soft components, where traditional contact-based micrometers may cause damage or introduce measurement errors. They are valued for their non-invasive measurement process, high precision, and ease of use.

The major global manufacturers of Digital Type Air Micrometer include DAI-ICHI SOKUHAN WORKS, OJIYA SEIKI, SKS, DONG DO EI, Dongguan SYS industrial, Deva, Lee Power Gages, etc. The global players competition landscape in this report is
