Research Summary

Dihydroxyacetone (DHA) is a chemical compound used primarily in the cosmetic and skincare industry for its ability to create a temporary tan or bronzed appearance on the skin. It is commonly found in self-tanning products, including lotions, sprays, and creams. DHA interacts with the amino acids in the outermost layer of the skin, resulting in a brownish color that mimics the appearance of a natural tan. This color change is temporary and typically fades as the skin naturally sheds its outer layers. DHA-based self-tanning products offer a safer alternative to sun exposure for achieving a tan-like appearance, reducing the risk of sunburn and skin damage associated with UV rays.

The major global manufacturers of Dihydroxyacetone (DHA) include Merck, Givaudan, Hungsun Chemical, Spec-Chem Industry, Shaanxi Iknow Biotechnology, Changxing Pharmaceutical, Hubei Marvel-Bio Medicine, Huateng Pharma, etc. The global players competition landscape in this report is divided into three tiers.
