Research Summary

DIN 2353 tube fittings are standardized components used in hydraulic and fluid systems to establish secure and leak-tight connections between tubes or pipes. These fittings adhere to the DIN 2353 standard, which outlines the design, dimensions, and performance criteria for metric tube fittings. Typically consisting of a body, cutting ring, and nut, these fittings utilize a compression mechanism that involves tightening the nut to compress the cutting ring around the tube, creating a dependable and sealed connection capable of withstanding high pressures and vibrations. DIN 2353 tube fittings find widespread application in hydraulic equipment, industrial machinery, and fluid transport systems where reliable fluid connections are essential for safe and efficient operations.
