Research Summary

Diode-pumped solid-state lasers (DPSSL) are a type of laser system that uses semiconductor diode lasers to pump energy into a solid-state gain medium, typically a crystal or glass doped with rare earth ions such as neodymium (Nd), ytterbium (Yb), or erbium (Er). In DPSSLs, the diode lasers emit light at wavelengths that match the absorption bands of the gain medium, efficiently transferring energy to the gain medium and stimulating the emission of laser light. This configuration offers several advantages over traditional flashlamp-pumped solid-state lasers, including higher efficiency, compact size, longer lifetime, and improved reliability. DPSSLs are widely used in various applications such as laser marking, engraving, cutting, welding, medical surgery, scientific research, and telecommunications. Their versatility, performance, and cost-effectiveness make them indispensable tools in numerous industrial, commercial, and scientific fields.

The major global manufacturers of Diode Pump Solid State Lasers include Coherent, MKS Instruments, Trumpf, Lumentum, Lumibird (Quantel), H?BNER Photonics, Laser
