Notably, the China Diodes market has changed rapidly in the past few years. By 2025, China's market size is expected to be Million USD, representing approximately % of the global market share.

Research Summary

Diodes are semiconductor devices with two terminals that allow electric current to flow in one direction while blocking it in the opposite direction. They are crucial components in electronic circuits, serving various functions such as rectification, signal modulation, voltage regulation, and switching. When forward-biased (positive voltage applied to the anode and negative to the cathode), diodes permit current flow, while in reverse-bias conditions, they exhibit a high resistance, effectively preventing current passage. This one-way conductive property makes diodes fundamental for converting alternating current (AC) to direct current (DC) in rectifiers, as well as for controlling current flow and protecting circuits from voltage spikes. Different types of diodes, such as light-emitting diodes (LEDs), Zener diodes, and Schottky diodes, offer specialized functions, making them versatile building blocks in modern electronics.

The major global manufacturers of Diodes include Vishay Intertechnology, Rohm, ON Semiconductor, Infineon, Nexperia (Wingtech), ST Microelectronics, Diodes Incorporated, PANJIT Group, Toshiba, Fuji Electric, Kyocera AVX, Littelfuse (IXYS), Microchip (Microsemi), Sanken Electric, Texas Instruments, Bourns, Central
