Research Summary

Dual In-line Package (DIP) switches are electronic components consisting of a row of tiny switches arranged in a compact package with two parallel rows of pins for soldering onto a printed circuit board (PCB). Each switch can be set to either an ON or OFF position using a small lever or slide mechanism. DIP switches are used to configure or select various settings in electronic devices or circuits, such as defining memory addresses, selecting communication protocols, setting hardware options, or adjusting parameters. They offer a simple and reliable way to customize the behavior or configuration of a device without requiring additional software or complex interfaces. DIP switches are commonly found in applications like computer hardware, industrial control systems, consumer electronics, and embedded systems.

The major global manufacturers of DIP Switches include Nidec Copal Electronics, TE Connectivity, CTS Corporation, Diptronics Manufacturing, Würth Electronics, Grayhill, Hartmann Codier, Omron, E-Switch, NKK Switches, Dailywell, Littlefuse, ALPS, TAIWAY, KNITTER-SWITCH, Salecom Electronics, VEGA Electronic, etc. The global
