Research Summary

Diphenyl carbonate is a chemical compound with the molecular formula $(C_6H_5O)_2CO$. It is a colorless to white crystalline solid that is commonly used as a raw material in the production of polycarbonate plastics. Diphenyl carbonate is produced through the reaction of phenol with phosgene, resulting in the formation of diphenyl carbonate and hydrochloric acid. The compound is then purified and used in polymerization reactions to synthesize polycarbonate resins, which are widely used in various applications such as automotive parts, electronic components, optical lenses, and household products. Diphenyl carbonate serves as a key building block in the manufacture of polycarbonate plastics due to its ability to form strong and transparent polymers with excellent thermal and mechanical properties. Additionally, it is also used in organic synthesis as a reagent in the preparation of various organic compounds.

The major global manufacturers of Diphenyl Carbonate include SABIC, Covestro, Lotte Chemical, LG Chem, CHIMEI, Trinseo, Lihuayi Weiyuan, Daphoon, etc. The global players competition landscape in this report is divided into three tiers. The first tier
