Research Summary

Disc prostheses, also known as artificial spinal discs or disc replacements, are medical devices used to treat degenerative disc disease or other spinal conditions that cause chronic back pain. These prostheses are designed to replace damaged or worn-out intervertebral discs, the cushions that sit between the vertebrae of the spine. Disc prostheses are typically made of biocompatible materials and mimic the natural function of healthy discs, providing support, flexibility, and shock absorption to the spine. The surgical procedure involves removing the damaged disc and replacing it with the artificial disc, aiming to alleviate pain, restore spinal stability, and maintain or improve the patient's range of motion. Disc prostheses offer an alternative to traditional spinal fusion surgery, potentially reducing the risk of adjacent disc degeneration and allowing for a more natural spinal movement post-surgery.

The major global manufacturers of Disc Prostheses include Medtronic, Zimmer Biomet, Orthofix Company, NuVasive, Centinel Spine, Globus Medical, B. Braun, Alphatec Spine, AxioMed, Simplify Medical, FH Orthopedics, Aditus Medical, Medicea, Spineart,
