Research Summary

Disc springs, also known as Belleville washers or conical spring washers, are mechanical components used to provide controlled axial deflection and load distribution in various applications. These conically shaped, thin, circular metal washers are designed to exert a spring force when compressed. When stacked together or used individually, disc springs can absorb and distribute forces, compensate for thermal expansion or contraction, maintain tension in bolted connections, and dampen vibrations. They are commonly used in industries such as automotive, aerospace, construction, and machinery to achieve accurate spring rates and precise load adjustments in compact spaces, offering versatility in managing different load conditions and maintaining consistent pressure across varying environments.

The major global manufacturers of Disc Springs include MW Industries, Scherdel, Mubea, Schnorr, Christian Bauer, Heiwa Hatsujiyo Industry, Iwata Denko, Lesjofors, Igus, Anderton International, SPIROL International Corporation, Tohatsu, International Industrial Springs (IIS), Changzhou Disc Spring, Belleville Spring, Hagens Fjedre, etc. The global players competition landscape in this report is divided into three tiers.
