Research Summary

Discontinuous screen changers are devices used in polymer processing, particularly in extrusion processes, to maintain the quality and consistency of the material being processed by removing impurities and contaminants. These screen changers consist of multiple screens or filter elements that can be alternated manually or automatically. When one set of screens becomes clogged or contaminated, the process temporarily halts, and the dirty screens are replaced with clean ones. This ensures the continuous flow of clean material through the extruder, preventing defects and inconsistencies in the final product. Discontinuous screen changers are employed in plastic and rubber industries to enhance product quality and reduce downtime associated with equipment maintenance and material changeovers.

The major global manufacturers of Discontinuous Screen Changers include Nordson, Maag, JC Times, Parkinson Technologies, PSI, Anji Plastic, Erema, Batte Mechanical, Trendelkamp, ECON, Alpha Marathon, Plasmac, CROWN, etc. The global players competition landscape in this report is divided into three tiers.
