Research Summary

Disodium nucleotide refers to a compound composed of a nucleotide molecule, which consists of a nitrogenous base (such as adenine, guanine, cytosine, or uracil), a five-carbon sugar (ribose or deoxyribose), and one or more phosphate groups, with two sodium ions (Na⁺) attached. These compounds are commonly used as flavor enhancers in food products, where they contribute to the savory taste known as umami. Disodium nucleotides, such as disodium inosinate (IMP) and disodium guanylate (GMP), are often used in combination with monosodium glutamate (MSG) to enhance the flavor of soups, sauces, snacks, and processed foods. They work synergistically with glutamate to intensify and round out the savory taste, providing a richer and more complex flavor profile. Disodium nucleotides are considered safe for consumption and are widely used in the food industry.

The major global manufacturers of Disodium nucleotide include CJ Group, Ajinomoto, Meihua Holdings Group, Guangdong Zhaoqing Xinghu Bio-Technology, Daesang Corporation, etc. The global players competition landscape in this report is divided into
