### Research Summary

Disposable blood pressure cuffs are medical devices used to measure a patient's blood pressure in healthcare settings. Made from soft and flexible materials, these cuffs are designed for single-use applications and are intended to reduce the risk of cross-contamination between patients. They consist of an inflatable bladder that wraps around the upper arm and a closure mechanism to secure the cuff in place. A healthcare professional inflates the bladder using a bulb or automated pump, and a pressure gauge provides readings of the patient's systolic and diastolic blood pressure. After use, the cuff is discarded, preventing the transmission of infections and enhancing hygiene practices in clinical environments.
