Research Summary

Disposable cervical ripening balloons are medical devices used in obstetrics and gynecology to aid in the induction of labor. These balloons are inserted into the cervix and filled with sterile saline or another solution to gently apply pressure. This pressure helps to soften and dilate the cervix, preparing it for labor induction or procedures like labor induction for medical reasons or before certain surgical procedures. The balloons are designed for single-use applications, reducing the risk of infection and ensuring sterility during the procedure. They are part of a broader range of tools and techniques used in obstetrics to manage and support the natural progression of labor when necessary.
