Research Summary

Disposable lighters are compact and portable devices used for igniting flames, primarily for lighting cigarettes, candles, or other combustible materials. These lighters are designed for one-time use and are often made from plastic, featuring a built-in mechanism that produces a controlled spark to ignite a flammable gas, typically butane, which then produces a steady flame. Disposable lighters are widely available and convenient for quick and easy fire starting, making them popular for everyday tasks that require a source of controlled flame. Once the fuel is exhausted, these lighters are discarded, and new ones can be purchased, ensuring a constant supply of fire-starting capabilities.
