Research Summary

Disposable masks and reusable masks are types of face coverings used for personal protection, particularly in situations where there is a need to reduce the spread of infectious particles. Disposable masks are designed for single-use and are typically made of lightweight materials, such as non-woven fabric, often with a metal nose clip and ear loops. Reusable masks, on the other hand, are intended for multiple uses and are often crafted from more durable materials like cotton or other woven fabrics. Reusable masks usually feature adjustable straps and often have pockets for inserting replaceable filters. Both types of masks aim to provide a barrier that helps prevent respiratory droplets from being released into the air and coming into contact with others, thereby playing a role in mitigating the spread of illnesses like colds, flu, and viruses like COVID-19.
