Research Summary

A disposable safety syringe is a medical device designed to provide safe and hygienic administration of medications or withdrawal of fluids. It features a retractable or protective mechanism that encloses the needle after use, reducing the risk of needlestick injuries and accidental needle reuse. These syringes are used in healthcare settings to prevent healthcare workers from being exposed to potentially contaminated needles and to enhance patient safety. Disposable safety syringes contribute to infection control measures and are particularly important in reducing the transmission of bloodborne pathogens. After use, the needle is automatically shielded or retracted, making these syringes a valuable tool in preventing accidental needle injuries and promoting safe disposal.
