### Research Summary

A disposable temperature probe is a single-use device designed to measure body temperature in clinical settings. Typically made with a thin, flexible material, these probes are often used in conjunction with electronic thermometers to ensure accurate temperature readings. The design prioritizes hygiene and convenience, reducing the risk of cross-contamination between patients. Disposable temperature probes are often employed in environments such as hospitals, clinics, and emergency care, where maintaining sterility is critical, and they are disposed of after each use to prevent any potential infection or data contamination.
