Research Summary

A dissolved gas analyzer is a specialized instrument used to detect and measure the concentration of dissolved gases in liquids, particularly in transformer oils or insulating fluids used in high-voltage electrical equipment. This technology is vital for monitoring the health and performance of power transformers, as gases generated due to electrical and thermal stresses can indicate potential faults or degradation. Dissolved gas analyzers typically use gas chromatography or spectroscopy techniques to identify and quantify gases like hydrogen, methane, ethylene, and others that might be indicative of various transformer issues. By analyzing these dissolved gases, maintenance professionals can diagnose potential problems early, assess transformer condition, and schedule maintenance or repairs, ultimately enhancing the reliability and longevity of electrical infrastructure.

The major global manufacturers of Dissolved Gas Analyzer include General Electric, ABB, Qualitrol, Morgan Schaffer, Sieyuan Electric, Advanced Energy Company, Weidmann Electrical Technology, Gatron, EMH Energy-Messtechnik, SDMyers, Drallim,
