### Research Summary

Distributed Antenna Systems (DAS) are network solutions designed to enhance wireless coverage and capacity within large indoor or outdoor areas by distributing and extending cellular and wireless signals. DAS installations consist of a network of antennas strategically placed throughout a location to provide improved connectivity, especially in areas with challenging signal propagation or high user density. These systems work by capturing, amplifying, and redistributing wireless signals from base stations or small cells to ensure consistent coverage and data throughput across the entire area. DAS technology is widely used in venues like stadiums, airports, office buildings, and public spaces, helping to alleviate network congestion and provide seamless connectivity for users of various wireless devices.

The major global manufacturers of Distributed Antenna Systems (DAS) include CommScope, Corning, Cobham (Axell Wireless), SOLiD, Boingo Wireless, Comba, JMA Wireless, Zinwave, etc. The global players competition landscape in this report is
