Research Summary

Distributed Fiber Optic Sensing (DFOS) is an advanced technology that transforms standard optical fibers into highly sensitive and versatile sensors capable of detecting and measuring a wide range of physical parameters along their length. By leveraging the interaction between light and the optical fiber, DFOS systems allow continuous and real-time monitoring of parameters like temperature, strain, pressure, and vibration over extensive distances. This technology finds applications in industries such as oil and gas, infrastructure, geophysics, and environmental monitoring, enabling precise data collection and analysis for safety, asset integrity, and performance optimization. DFOS offers significant advantages due to its ability to cover large areas with a single fiber and its adaptability to various sensor configurations, making it a powerful solution for distributed sensing needs.

The major global manufacturers of Distributed Fiber Optic Sensing (DFOS) include Schlumberger, Halliburton, Baker Hughes, Fotech Solutions, Silixa, OptaSense
