Research Summary

A distributor and ignition coil are components within an internal combustion engine's ignition system. The distributor is a mechanical device that distributes high-voltage electrical pulses to the spark plugs in the correct firing order, allowing the engine's cylinders to ignite fuel and air mixture at the precise moment. The ignition coil, often connected to the distributor, transforms the low-voltage power from the battery into the high-voltage pulses required to create a spark at the spark plugs. Together, the distributor and ignition coil play a crucial role in the ignition process, ensuring proper timing and combustion in gasoline-powered engines. However, many modern engines now use electronic ignition systems, replacing traditional distributors with more efficient and precise electronic controls.

The major global manufacturers of Distributor and Ignition Coil include Delphi Technologies PLC, DENSO CORPORATION, Diamond Electric Mfg, Bosch, Federal Mogul, Borgwarner, Hitachi Automotive Systems, Eldor Corporation, Standard Motor Products (SMP), Yura Tech, Mitsubishi Electric, AcDelco, NGK, Marshall Electric,
