### Research Summary

Dithiocarbamate fungicides are a class of chemical compounds used in agriculture to control fungal diseases in crops. These fungicides contain dithiocarbamate functional groups, typically in the form of zinc or manganese salts, and work by inhibiting the growth and development of fungal pathogens. Dithiocarbamate fungicides are known for their broad-spectrum activity, making them effective against a range of fungal infections on crops such as fruits, vegetables, cereals, and ornamental plants. They are used to prevent and manage diseases like powdery mildew, scab, and rust. However, their usage can be subject to regulations and restrictions due to potential environmental and health impacts, which has led to the development of alternative, more environmentally friendly fungicide options.

The major global manufacturers of Dithiocarbamate Fungicides include UPL, Coromandel International, Indofil, DuPont, Taminco, ADAMA, BASF, Bayer Cropscience, Nufarm, FMC, Limin Chemical, Hebei Shuangji Chemical, Nantong Baoye Chemical, etc. The global players competition landscape in this report is divided into
