Research Summary

DKDP (Deuterated Potassium Dihydrogen Phosphate) Pockels cells are electro-optic devices used in optics and laser technology for controlling and modulating the polarization of light beams. DKDP crystals exhibit the Pockels effect, where their refractive index changes proportionally to an applied electric field. When incorporated into a Pockels cell, DKDP crystals can rapidly alter the polarization state of a laser beam passing through them by applying an electric field across the crystal. This modulation of polarization is utilized in various applications such as Q-switching and mode-locking in lasers, as well as in optical switching and pulse manipulation. DKDP Pockels cells are prized for their high electro-optic coefficients and high laser damage thresholds, making them valuable components in precise laser systems and experimental setups.

The major global manufacturers of DKDP Pockels Cells include CASTECH, Jinan Cryststrong Photoelectric Technology, CRYSTECH Inc, THATSHIGH Photoelectric Technology, Coupletech, Jinan Nanosecond Photoelectric Technology, EKSMA Optics,
