Research Summary

DNA microarray chips, also known as gene chips or DNA arrays, are small solid surfaces, often made of glass or silicon, onto which thousands to millions of different DNA sequences are attached at predefined locations. These sequences can represent genes, gene fragments, or other genetic elements. By utilizing fluorescently labeled DNA or RNA samples, researchers can hybridize them with the DNA sequences on the chip, allowing the measurement of gene expression levels or the detection of specific genetic variations. DNA microarray chips are used in various biological and medical research applications to simultaneously analyze the expression of a large number of genes, study genetic variations, identify disease markers, and understand complex cellular processes at a molecular level.

The major global manufacturers of DNA Microarray Chips include Illumnia, Thermo Fisher Scientific, Agilent Technologies, Scienion, Applied Microarrays, Arrayit Corporation, Toray, Biometrix Technology, Savyon Diagnostics, etc. The global players competition landscape in this report is divided into three tiers.
