Research Summary

Dock decking panels refer to specialized flooring components used in the construction of docks, marinas, piers, and waterfront structures. These panels are designed to provide a stable and durable walking surface for pedestrians, vehicles, and equipment accessing or mooring at the waterfront. Dock decking panels are typically made from materials such as wood (e.g., pressure-treated lumber, tropical hardwoods), composite materials (e.g., wood-plastic composites), or synthetic materials (e.g., PVC, polyethylene). They are engineered to withstand exposure to water, UV radiation, and varying weather conditions without warping, rotting, or deteriorating over time. Dock decking panels are available in various sizes, shapes, and surface textures to accommodate different structural designs, load capacities, and aesthetic preferences. They play a critical role in enhancing safety, functionality, and longevity of waterfront infrastructure by providing secure and slip-resistant footing for users and supporting the operational needs of marine activities and vessel mooring.

The major global manufacturers of Dock Decking Panels include UPM-Kymmene Corporation, Weyerhaeuser Company, West Fraser Timber Co, Universal Forest
