Research Summary

A Dose Area Product (DAP) meter is a medical device used in radiology to measure the amount of radiation exposure a patient receives during a diagnostic or therapeutic procedure. It calculates the total radiation dose multiplied by the area of the exposed field, providing a comprehensive measure of the overall radiation risk. DAP meters are typically integrated into X-ray machines and other radiographic equipment. By capturing data on the dose and exposure area, these meters help ensure patient safety, optimize radiation usage, and maintain compliance with regulatory standards. They are essential for monitoring and minimizing radiation exposure in medical imaging, enhancing both patient care and clinical outcomes.
