### Research Summary

A dosimeter is a compact and portable device designed to measure and record an individual's exposure to potentially harmful factors such as ionizing radiation, including X-rays and gamma rays. This device plays a crucial role in ensuring the safety of individuals working in radiation-prone environments, such as nuclear power plants, medical facilities, and industrial settings. Dosimeters come in various forms, including passive dosimeters that collect radiation energy and store it for later analysis, and active dosimeters that provide real-time readings of radiation levels. The information collected by dosimeters helps authorities monitor and regulate radiation exposure, ensuring that individuals are not exposed to hazardous levels of radiation and that safety protocols are effectively maintained.

The major global manufacturers of Dosimeter include Landauer, Mirion Technologies, ATOMTEX, Aloka, Fuji Electric, Thermo Fisher Scientific, IBA Dosimetry, Unfors RaySafe, Tracerco, Panasonic, Radiation Detection Company, Ludlum Measurements, Canberra, Polimaster, Radiation Monitoring Devices, Arrow-Tech, Biodex Medical
