Research Summary

Dot matrix printing is a traditional and impact-based method of producing text and graphics on paper. In this printing technology, a print head, usually containing a matrix of pins or wires, strikes an ink-soaked ribbon against the paper to create patterns of dots. By precisely controlling the pins' movement and the timing of impacts, various characters and images are formed. Dot matrix printers are known for their durability and ability to produce carbon copies due to the impact mechanism. While they might not offer the high-quality output of modern inkjet or laser printers, they are still valued in specific applications such as in noisy environments or for producing multipart forms. Despite being largely replaced by more advanced printing technologies, dot matrix printing retains its utility in situations where reliability, ruggedness, and compatibility with legacy systems are key requirements.

The major global manufacturers of Dot Matrix Printing include EPSON, OKI, Fujitsu, Toshiba, Lexmark, Printek, Olivetti, Jolimark, New Beiyang, Star, GAINSCHA, SPRT, ICOD, Winpos, Bixelon, ZONERICH, etc. The global players competition landscape in
