### Research Summary

A double-walled corrugated hide pipe is a specialized type of conduit used for the protection and management of cables and wiring systems. This pipe consists of two layers: an outer corrugated layer and an inner smooth layer, both made from high-quality materials such as plastic or PVC. The corrugated exterior provides added strength and flexibility, enabling the pipe to withstand external pressure and environmental conditions, while the smooth interior facilitates the smooth passage of cables. This design ensures that cables are shielded from mechanical damage, moisture, and other potential hazards, while also allowing for easy installation and maintenance.
