Research Summary

Downhole tools are specialized equipment and instruments designed for use in wells and boreholes, typically in industries such as oil and gas exploration, geothermal energy, and mining. These tools are deployed deep underground to perform various tasks, such as drilling, logging, measuring, and maintaining well integrity. They encompass a diverse range of tools, including drilling bits, logging tools, packers, valves, and sensors. Drilling bits are used to create boreholes, while logging tools measure properties of the surrounding rock formations and fluids. Packers and valves help isolate specific sections of the wellbore, and sensors gather critical data about temperature, pressure, and other downhole conditions. These tools are crucial for efficient well construction, reservoir evaluation, and ongoing well operations, contributing to resource extraction, energy production, and informed decision-making in subsurface industries.

The major global suppliers of Downhole Tools include Baker Hughes, Halliburton, Schlumberger, National Oilwell Varco, Weatherford International, SJS, ANTHON, Shandong Molong Petroleum Machinery, Dril-Quip (TIW), etc. The global players
