Research Summary

DPF retrofit, which stands for Diesel Particulate Filter retrofit, refers to the process of installing a diesel particulate filter onto an existing diesel engine that was not originally equipped with one. Diesel particulate filters are emission control devices designed to capture and reduce the emissions of fine particles, or particulate matter, from the exhaust gases of diesel engines. Retrofitting involves adding the filter system to an older diesel vehicle or piece of equipment to comply with stricter emissions regulations and improve air quality. DPF retrofitting typically includes integrating the filter assembly, along with necessary sensors and controls, into the exhaust system of the diesel engine. This retrofitting process aims to reduce particulate emissions, contributing to lower pollution levels and better environmental sustainability while extending the operational life of older diesel engines.

The major global manufacturers of DPF Retrofit include Tenneco, Delphi, Johnson Matthey, Donaldso, Weifu, Tenneco, ESW Group, HUSS, SPMC, HJS Emission Technology, MANN+HUMMEL, Hug Engineering, Dinex, etc. The global players competition landscape in this report is divided into three tiers.
