Research Summary

Drag finishing machines are specialized equipment used in the surface finishing of various industrial parts and components. In this mechanical finishing process, parts are placed in a container or work bowl along with abrasive media and a finishing compound. The bowl is then rotated, and the contents are ?dragged? by the rotational movement, causing the media to interact with the parts and create a smoothing or polishing action. Drag finishing machines are particularly effective for deburring, edge radiusing, polishing, and surface refinement. They are often used for small to medium-sized parts that need to be finished uniformly and without damage. These machines offer versatility, enabling the adjustment of rotational speed, media types, and compounds to achieve the desired finish. Drag finishing is popular in industries such as jewelry, aerospace, and automotive manufacturing, where precise and consistent surface quality is essential.

The major global manufacturers of Drag Finishing Machines include OTEC, Rosler, Walther Trowal, Bel Air Finishing, Tipton, Outaike, Lesheng, Longsheng, PSW Tech,
