### Research Summary

Drawer slides, also known as drawer glides or runners, are mechanical hardware components used in cabinetry and furniture to enable the smooth and controlled movement of drawers. These slides are designed to allow drawers to be opened and closed effortlessly while providing stability and support. They typically consist of two main components: a stationary piece attached to the cabinet or furniture frame and a moving piece attached to the drawer itself. The moving piece slides along the stationary piece, often utilizing ball bearings or rollers to reduce friction and ensure a smooth glide.
