### Research Summary

Drilling fluids, also known as drilling muds, are specialized mixtures of fluids, solids, and additives used in drilling operations, particularly in the oil and gas industry. These fluids serve multiple essential purposes, such as cooling and lubricating the drill bit, carrying cuttings to the surface, maintaining wellbore stability, and creating pressure control. Drilling fluids also help prevent blowouts by exerting hydrostatic pressure on the wellbore to counteract the pressure of underground fluids. The composition of drilling fluids can vary based on the geological formation being drilled, and they often consist of water, clay, various chemicals, and sometimes oil-based components. The selection and management of drilling fluids are crucial in ensuring safe and efficient drilling operations.

The major global manufacturers of Drilling Fluids include Schlumberger, Halliburton, Baker Hughes, Newpark Resources, Tetra Technologies, CES Energy Solutions, NOV Inc., Scomi Group, Secure Energy Services, Weatherford International, Q'Max Solutions, CNPC, Sinopec, CNOOC, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises

that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
