Research Summary

Drilling starch, also known as drilling fluid starch or drilling modified starch, is a natural or chemically modified carbohydrate-based additive used in drilling fluids within the oil and gas industry. It serves as a versatile viscosifier and rheology modifier, helping to control the flow properties, viscosity, and gel strength of drilling muds. By adjusting the viscosity, drilling starch aids in carrying cuttings to the surface, cooling and lubricating the drill bit, and maintaining wellbore stability. The starch particles swell when mixed with water, creating a thicker fluid that can effectively suspend solids and enhance the overall performance of drilling operations.

The major global manufacturers of Drilling Starch include Schlumberger, Novidon, SPAC Group, Haytak FZE, Santosh Starch Products Limited, CLOTO, Madhu Hydrocolloids, Southern Hydrocarbons, Gulf Starch Plant (GSP), Gumpro Drilling Fluids, Jiahe Energy Saving Material, Hebei Yanxing Chemical, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant

industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
