Research Summary

Drum liners are protective plastic or polymer bags designed to fit inside the interior of drums or barrels. They serve as a barrier between the contents of the drum and the drum itself, preventing direct contact and potential contamination. Drum liners are often used to store, transport, or dispose of various substances, such as liquids, powders, chemicals, or hazardous materials. They help preserve the integrity of both the contents and the drum, making it easier to handle, clean, and reuse the drum for different purposes. Drum liners come in different sizes and materials to accommodate various industries and applications, ensuring efficient and safe storage and handling of materials within industrial and commercial settings.
