### Research Summary

Dry Battery Electrode (DBE) technology is an innovative approach in the production of battery electrodes, where the active materials, binders, and conductive additives are processed without the use of solvents or liquids. This dry processing method eliminates the need for the wet slurry-based techniques traditionally used in battery manufacturing, offering several advantages such as reduced energy consumption, faster production times, and a more environmentally friendly process. DBE technology is particularly beneficial for high-energy-density batteries, including lithium-ion and solid-state batteries, as it enables the creation of thinner, more efficient electrodes with enhanced performance and stability. The process also allows for greater scalability and cost-effectiveness, making it a promising development for the future of battery manufacturing, particularly in industries like electric vehicles and renewable energy storage.

The major global suppliers of Dry Battery Electrode (DBE) Technology include Tesla,

Shanghai Legion, LiCAP Technologies, Shanghai Huaqi Ruizhi New Energy Technology Co., Ltd, GMCC Electronic Technology, etc. The global players competition landscape in this report is divided into three tiers.
