Research Summary

A dry ice pellet blasting machine is a specialized equipment used for cleaning surfaces by propelling dry ice pellets at high speeds. This cleaning method, also known as dry ice blasting, involves using compressed air to accelerate dry ice pellets to supersonic velocities, creating kinetic energy that effectively removes contaminants, dirt, coatings, and residues from various surfaces. The pellets sublime upon impact, transforming directly from solid to gas, leaving no abrasive waste behind. Dry ice pellet blasting is non-abrasive, environmentally friendly, and can be used in industries like manufacturing, automotive, food processing, and restoration to clean delicate surfaces and equipment without causing damage or using harmful chemicals. The machine facilitates efficient and precise cleaning, making it a valuable tool for various cleaning applications.
