### Research Summary

Dry offset printing plates are a type of printing plate used in the offset printing process, where ink is transferred from a plate to a rubber blanket and then onto the printing surface. Unlike traditional wet offset plates, dry offset plates do not require the use of moisture or dampening solutions during the printing process. These plates are typically made of photopolymer material, which hardens when exposed to light, creating a relief image that can hold ink. Dry offset printing plates offer several advantages, including faster setup times, reduced waste, and lower maintenance, as they eliminate the need for water and chemicals typically used in wet offset systems. They are commonly used for high-quality printing on a variety of substrates, including packaging materials, labels, and commercial print applications, where speed and precision are essential.

The major global manufacturers of Dry Offset Printing Plates include Toray, Tokushu Abe Seihanjo, Carey Color, HELL Gravure Systems (Heliograph Holding), Creation Reprographics, XSYS, PlateCrafters, Acme Graphics, etc. The global players competition landscape in this report is divided into three tiers.
