Research Summary

Dry scroll vacuum pumps are advanced mechanical devices used for creating and maintaining vacuum environments by removing air and other gases from a sealed space. Unlike traditional oil-sealed pumps, dry scroll pumps operate without oil lubrication, minimizing contamination and making them suitable for applications requiring clean and oil-free vacuums. These pumps consist of two interlocking spiral-shaped scrolls, where one scroll orbits around the other, creating expanding and contracting pockets that trap and pump gas from the inlet to the exhaust. The pumping action occurs without physical contact between components, reducing wear and the need for lubrication. Dry scroll vacuum pumps are used in various fields, including laboratory research, semiconductor manufacturing, vacuum packaging, and analytical instrumentation, due to their reliability, reduced maintenance, and ability to generate a contaminant-free vacuum.

The major global manufacturers of Dry Scroll Vacuum Pumps include Edwards Vacuum, Anest Iwata, ULVAC, Air Squared Inc, Leybold, Agilent, Busch, Labconco,

Geowell, SKY Technnology Development, ScrollTEC, etc. The global players competition landscape in this report is divided into three tiers.
