### Research Summary

Drying systems for softgels are specialized equipment used in pharmaceutical and nutraceutical manufacturing to remove excess moisture from softgel capsules. Softgels are gelatin-based capsules containing liquid or semi-solid fill formulations. The drying process is crucial to prevent microbial growth, improve stability, and maintain the desired appearance of the softgel capsules. These drying systems often involve controlled air circulation, dehumidification, and temperature regulation to gently and uniformly remove moisture from the softgel shells without affecting the contents. Properly dried softgels ensure product integrity and extend shelf life, making them suitable for oral dosage forms of vitamins, supplements, and medications.

The major global manufacturers of Drying Systems for Softgels include Technophar, Changsung Softgel System, Long March Tianmin, SKY Softgel & Pack, Pharmagel Technology, GIC Engineering, Bochang, Sankyo, Joysun Pharma Equipment, Kamata, etc. The global players competition landscape in this report is divided into three tiers.
