Research Summary

Ductile cast iron, also known as nodular cast iron or spheroidal graphite iron, is a type of iron alloy known for its unique combination of strength, durability, and ductility. It is produced by adding small amounts of magnesium or other rare earth elements to molten iron, which encourages the formation of graphite nodules within the microstructure. This nodular structure provides ductile cast iron with improved mechanical properties compared to traditional gray cast iron, including higher tensile strength and impact resistance. Ductile cast iron offers versatility and is used in a wide range of applications such as pipes, automotive components, machinery parts, and engineering components where a balance between strength and machinability is desired.

The major global manufacturers of Ductile Cast Iron include Hitachi Metals, Grede Foundry, Wecast Industries, Draxton, Tianjin New Wei San Industrial, Aludyne, Metal Technologies, MAT Foundry, Castings PLC, Weichai Power (Weifang) Casting, FAW Foundry, Georg Fischer, Huaxiang Group, ACO Eurobar, INTAT Precision, Meide
