Research Summary

DVT pumps, or Deep Vein Thrombosis pumps, are medical devices designed to prevent or alleviate deep vein thrombosis (DVT), a condition where blood clots form in the deep veins of the legs, often occurring during periods of immobility or following surgery. These pumps consist of an inflatable cuff or sleeve that is placed around the patient's lower leg or thigh and a machine that intermittently inflates and deflates the cuff, gently squeezing and releasing the limb. This action mimics the muscle contractions of walking and promotes blood flow, helping to prevent the formation of blood clots. DVT pumps are commonly used in healthcare settings, particularly in surgical procedures or for patients who are bedridden, to reduce the risk of DVT and enhance overall blood circulation.

The major global manufacturers of DVT Pumps include ArjoHuntleigh, Zimmer Biomet, DJO, Breg, Devon Medical Products, Cardinal Health, Currie Medical Specialties, Mego Afek AC LTD, Normatec, ThermoTek USA, Bio Compression Systems, etc. The global players competition landscape in this report is divided into three tiers.
