Research Summary

A dye transfer inhibitor, commonly found in laundry detergents, is a chemical compound that prevents the unwanted transfer of colors from one fabric to another during the washing process. It works by forming a protective barrier around loose dyes that may be released from one garment and suspended in the wash water, thus preventing them from adhering to and staining other items in the same load. Dye transfer inhibitors are especially valuable when washing mixed loads of different colored or heavily dyed fabrics, ensuring that each garment retains its original color and appearance while reducing the risk of color bleeding and cross-contamination between textiles.

The major global manufacturers of Dye Transfer Inhibitor include Vertellus, BASF, Clariant, Ashland, Colour Synthesis Solutions, etc. The global players competition landscape in this report is divided into three tiers.
