Research Summary

E-methanol, or renewable methanol, is a sustainable chemical and fuel produced from non-fossil sources such as captured carbon dioxide (CO₂), green hydrogen, or biomass. As a versatile energy carrier, e-methanol serves as a clean alternative to traditional methanol derived from natural gas, offering significant reductions in greenhouse gas emissions. It is used in various applications, including as a feedstock in chemical industries, a fuel for vehicles and ships, and a key component in energy storage systems. E-methanol supports the global transition to a low-carbon economy by enabling carbon recycling and providing a renewable solution for industries seeking to reduce their environmental impact.

The major global manufacturers of E-methanol include OCI N.V., Methanex, Enerkem, S²dra, Alberta Pacific, BASF, Carbon Recycling International, Liquid Wind, ReIntegrate, CRI, Andes Mining and Energy, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong

competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
