Research Summary

Ethylene acrylic acid (EAA) and ethylene methacrylic acid (EMAA) copolymers are types of thermoplastic materials that are created through the copolymerization of ethylene with either acrylic acid or methacrylic acid. These copolymers exhibit a range of properties that make them valuable in various industrial applications. EAA copolymers are known for their excellent adhesion and versatility, making them suitable for use in adhesives, coatings, and as tie layers in multilayer packaging films. EMAA copolymers offer similar adhesion properties, with the added benefit of improved heat resistance, which makes them particularly useful in applications like hot melt adhesives and as a bonding agent for heat-sealable packaging films. Both EAA and EMAA copolymers contribute to enhancing adhesion and functionality in materials where secure bonding or sealing properties are vital.

The major global manufacturers of EAA and EMAA Copolymer include SK Global Chemical, Dow, ExxonMobil Chemical, INEOS, Honeywell, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises
