### Research Summary

An eCall system backup battery is a critical component in modern vehicle safety technology, designed to provide emergency communication services in the event of a crash. The eCall system automatically activates when a severe accident occurs, triggering an automatic emergency call to emergency responders with the vehicle's location and other essential information. The backup battery ensures that the system remains functional even if the vehicle's primary power source, such as the car battery, is damaged or depleted during the crash. This battery is typically compact, reliable, and designed to operate in extreme conditions, ensuring that the eCall system can communicate with emergency services even if the vehicle's main electrical system is compromised. By maintaining power to the eCall system, the backup battery plays a crucial role in enhancing the safety and efficiency of emergency response in critical situations, potentially saving lives by enabling faster assistance.

The major global manufacturers of eCall System Backup Battery include FDK, LG Energy Solution, VARTA AG, Panasonic, EVE Battery, GP Batteries, Highpower,
