Research Summary

An ECDIS (Electronic Chart Display and Information System) is an advanced navigation system used in maritime operations to enhance the safety and efficiency of vessel navigation. It integrates electronic navigational charts (ENCs) with real-time data from GPS, radar, AIS (Automatic Identification System), and other sensors to provide precise, up-to-date information about a ship's position and surrounding environment. ECDIS replaces traditional paper charts, offering features such as route planning, automatic updates, and alarms for potential hazards like shallow waters or collision risks. Widely adopted in the shipping industry, it complies with international regulations set by the International Maritime Organization (IMO), making it a critical tool for ensuring compliance and improving situational awareness in modern maritime navigation.
