### Research Summary

Edge computing in manufacturing refers to the decentralized processing and analysis of data generated within a factory or production environment, closer to the data source, as opposed to relying solely on centralized cloud computing resources. By deploying computational capabilities at or near the 'edge' of the network, typically at the shop floor or within manufacturing machinery, this approach enables real-time data processing, reducing latency and enhancing responsiveness. It allows manufacturers to efficiently handle and analyze the vast volumes of data produced by sensors, machines, and equipment, facilitating predictive maintenance, quality control, process optimization, and automation, ultimately improving operational efficiency and reducing downtime while ensuring data privacy and security.

The major global suppliers of Edge Computing in Manufacturing include IBM, Amazon Web Services, Microsoft, Cisco, Dell Technologies, HPE, GE, Huawei, Nokia, ADLINK, Litmus Automation, FogHorn Systems, Vapor IO, MachineShop (EdgeIQ), Saguna Networks, etc. The global players competition landscape in this report is divided into
